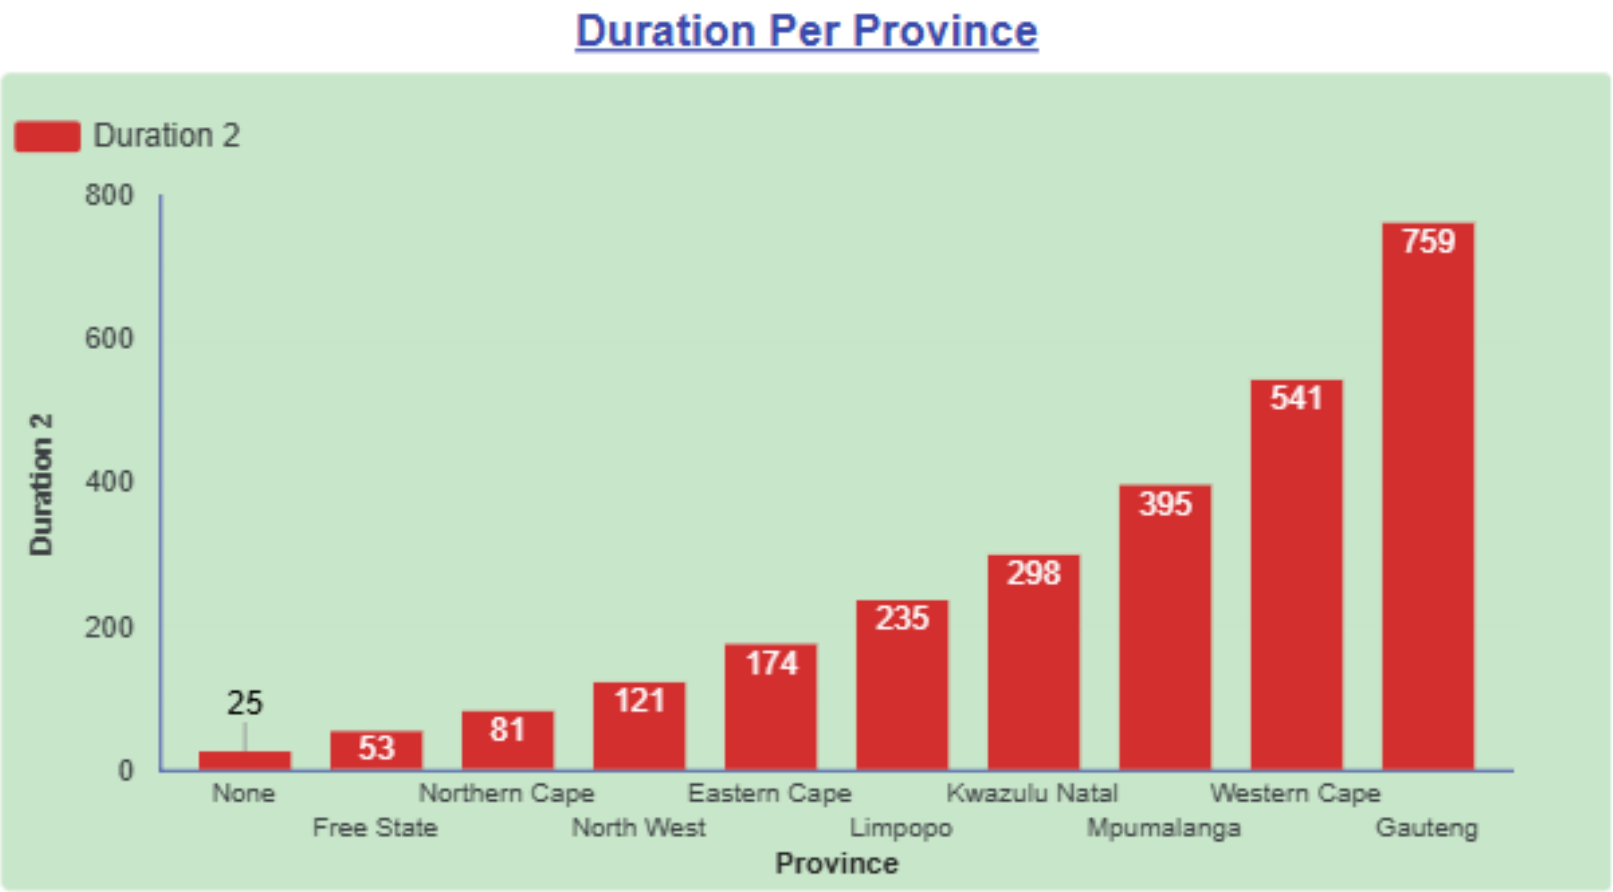
# BrightTV Viewership Analytics and Growth Recommendations

Insights and strategies to boost audience engagement

# BrightTV Viewership Analytics Overview and CEO Growth Objective

- Strategic Growth Objective
  - Bright TV aims to grow subscriptions in a competitive streaming market by enhancing user engagement and retention.
- Viewership Data Analysis
  - Detailed session and demographic data reveal patterns in content consumption and viewer behavior.
- Customer Value Management
  - CVM team uses analytics to design targeted initiatives increasing customer lifetime value and reducing churn.
- Practical Recommendations
  - Insights lead to optimized scheduling, personalization, off-peak engagement, and tailored content offerings.



# Viewership and User Profile Data Sources

### Provincial Engagement Overview

Gauteng leads with the highest duration (759), showing significantly stronger engagement than all other provinces.

### Top Performing Provinces

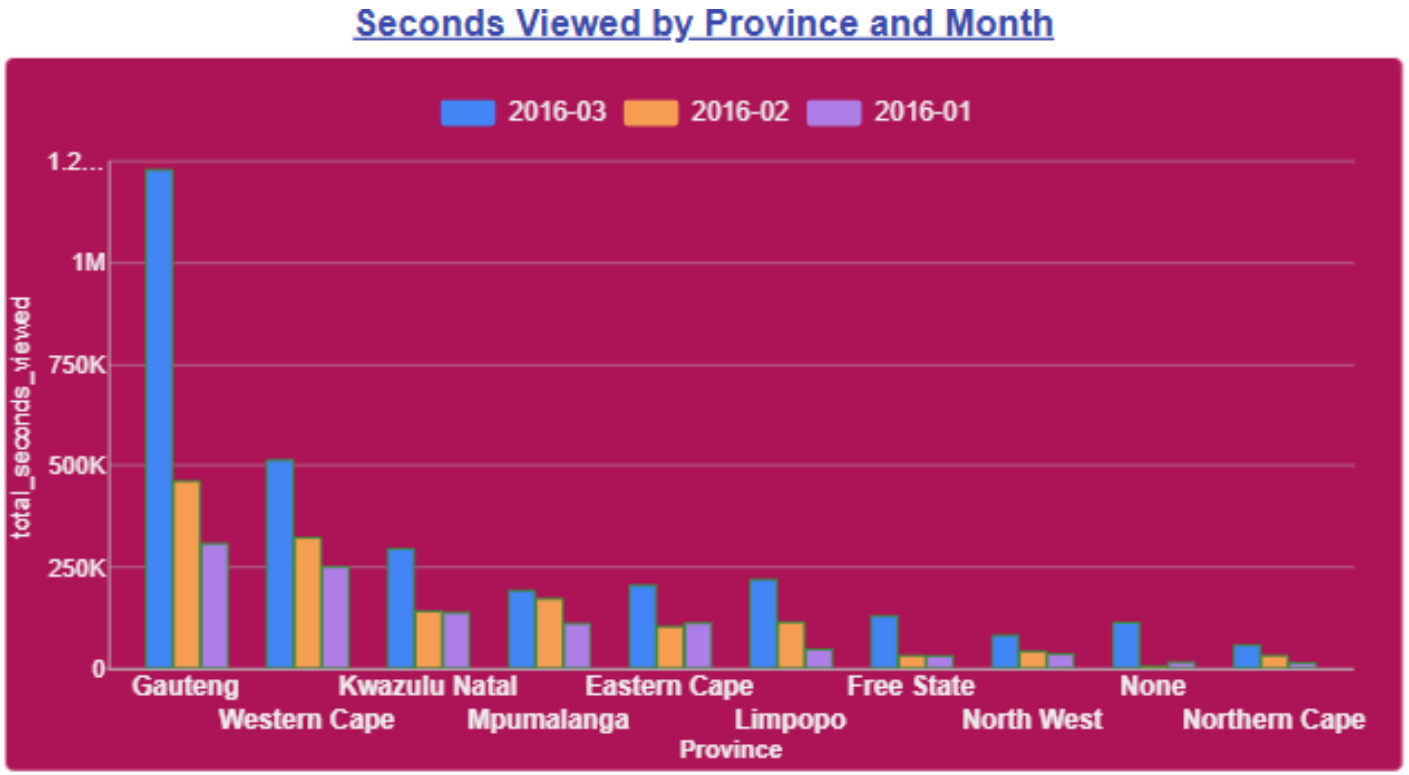
Western Cape (541) and Mpumalanga (395) follow Gauteng, forming a clear top-three in viewership duration.

### Mid-Tier Provinces

KwaZulu-Natal (298), Limpopo (235), and Eastern Cape (174) show moderate engagement and growth potential.

### Lower Engagement Provinces

Free State, Northern Cape, and North-West record the lowest durations, indicating limited reach or adoption.



# Key User Behaviour and Viewing Patterns

### Live Events Drive Engagement

Subscribers show strong engagement with live events and popular entertainment, boosting viewing duration and repeat sessions.

### Short, Frequent Viewing Sessions

Users prefer short, frequent viewing sessions aligning with modern digital consumption habits and on-the-go content access.

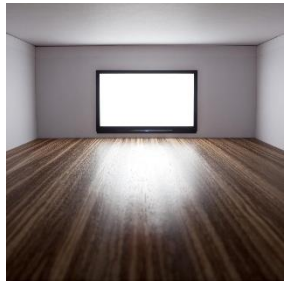
### Segmented User Engagement

Engagement varies across user segments, with some demographics showing higher activity and longer viewing times for targeted strategies.

# Peak and Low Viewership Periods

## Evening and Night Peaks

Viewership peaks during evening and night hours when users prefer longer and live content.



## Midday and Afternoon Lows

Midday and early afternoon show lower consumption, offering opportunities for targeted engagement.

## Strategic Scheduling

Aligning content and promotions with viewing rhythms maximizes platform performance and engagement.

# Inland Provinces Viewership Insights

### Viewing Time Impact

Time of day significantly affects subscriber viewing behavior, with distinct patterns during peak and off-peak hours.

### Content Type Influence

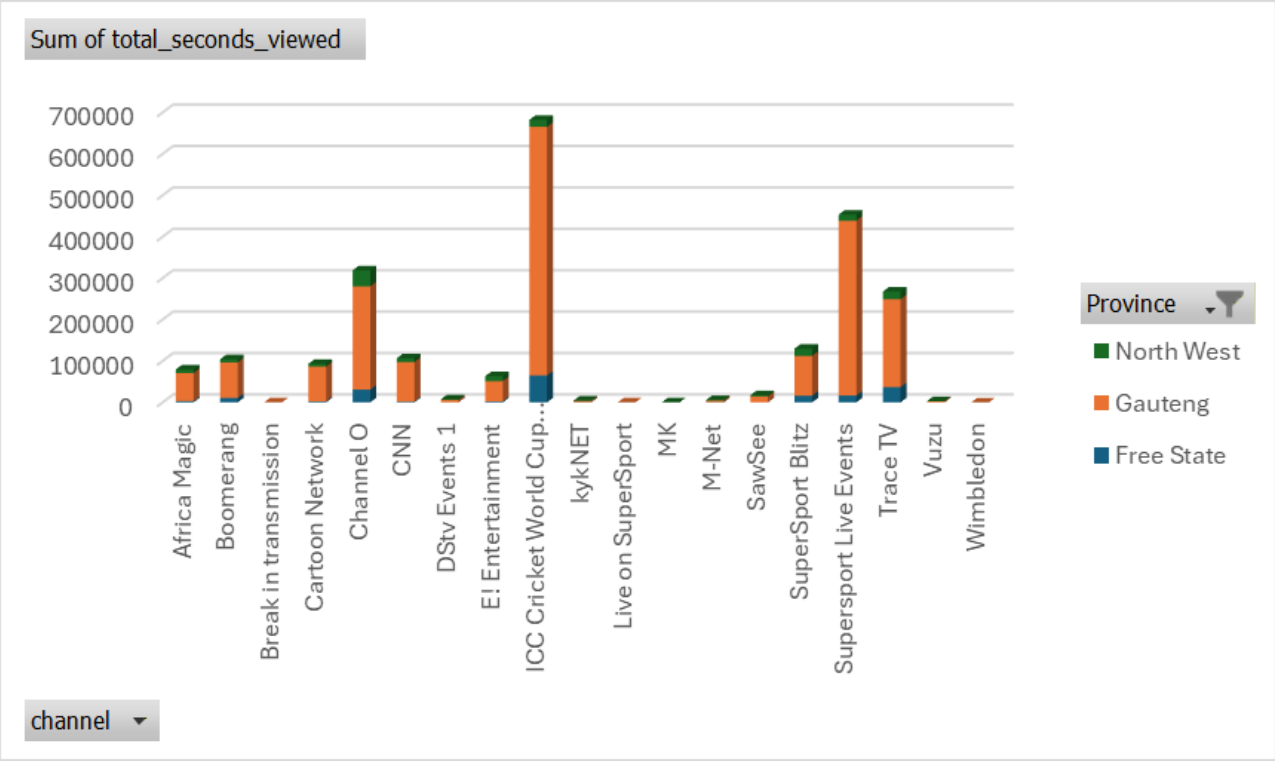
Live events, sports, and entertainment content drive higher engagement than generic programming on BrightTV.

### Demographic Preferences

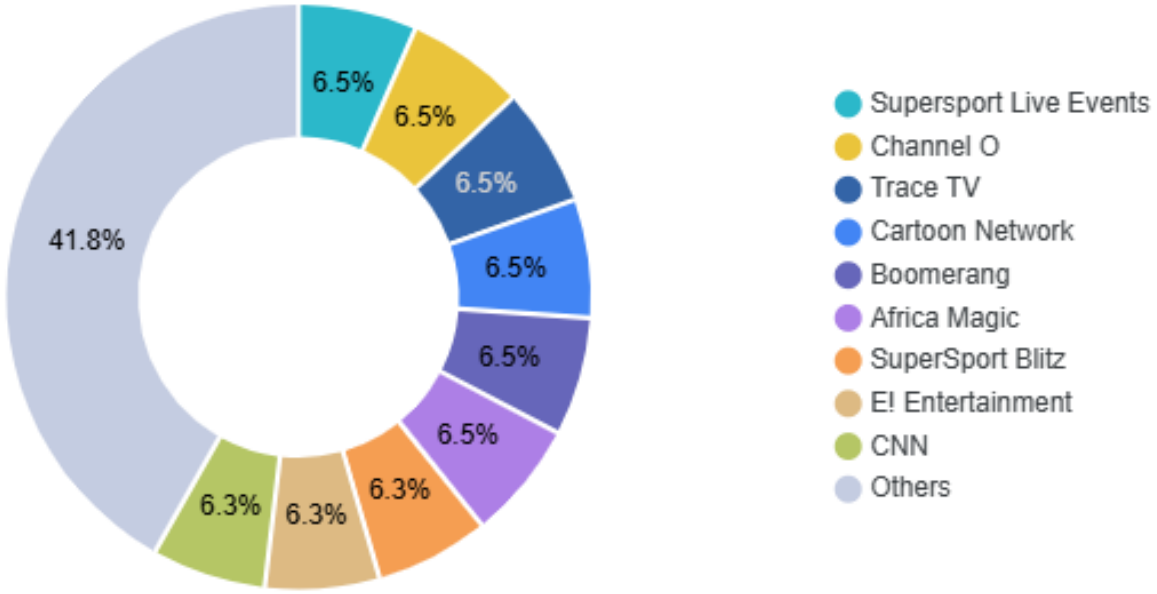
Viewer age and geographic location shape content preferences and viewing schedules, requiring personalized strategies.

### Data-Driven Decisions

Utilizing data analytics enables BrightTV to optimize content scheduling and promotion to boost engagement and subscriptions.



# Channel Distribution Overview

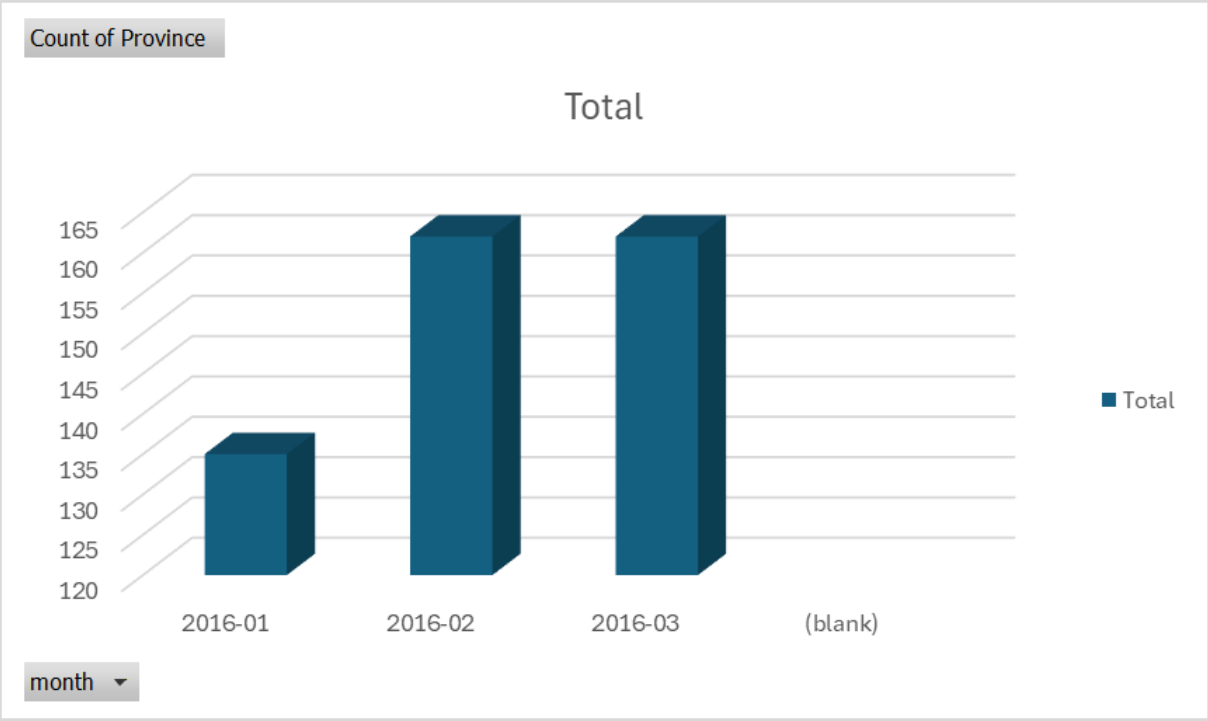


The “Others” category dominates the chart, accounting for just over 40% of total records, indicating a large spread across smaller or less frequent channels.

All named channels contribute similar, smaller shares (around 6–7% each), suggesting no single channel dominates by record count.

Overall, the distribution reflects diverse and fragmented content consumption, rather than reliance on a few leading channels.

# End-to-End Approach: From Data to Recommendations



**Step 1: Data Collection & Preparation**

Consolidated viewership data (total seconds viewed) across channels and months.

Ensured data quality by removing anomalies (e.g. negative viewing time).

Created a clean, analysis-ready dataset for consistent reporting.

**Step 2: Overall Viewership Analysis**

Analyzed total viewing time to understand overall consumption levels.

Identified which channels contribute most to platform engagement.

Assessed how engagement is distributed across the platform.

**Step 3: Channel Performance Assessment**

Compared channels based on their share of total seconds viewed.

Identified top-performing channels (e.g. Africa Magic) as key engagement drivers.

Identified lower-performing channels with growth potential.

**Step 4: Month-to-Month Trend Analysis**

Reviewed viewership by month to identify peaks and declines.

Observed stronger performance in early months, followed by tapering.

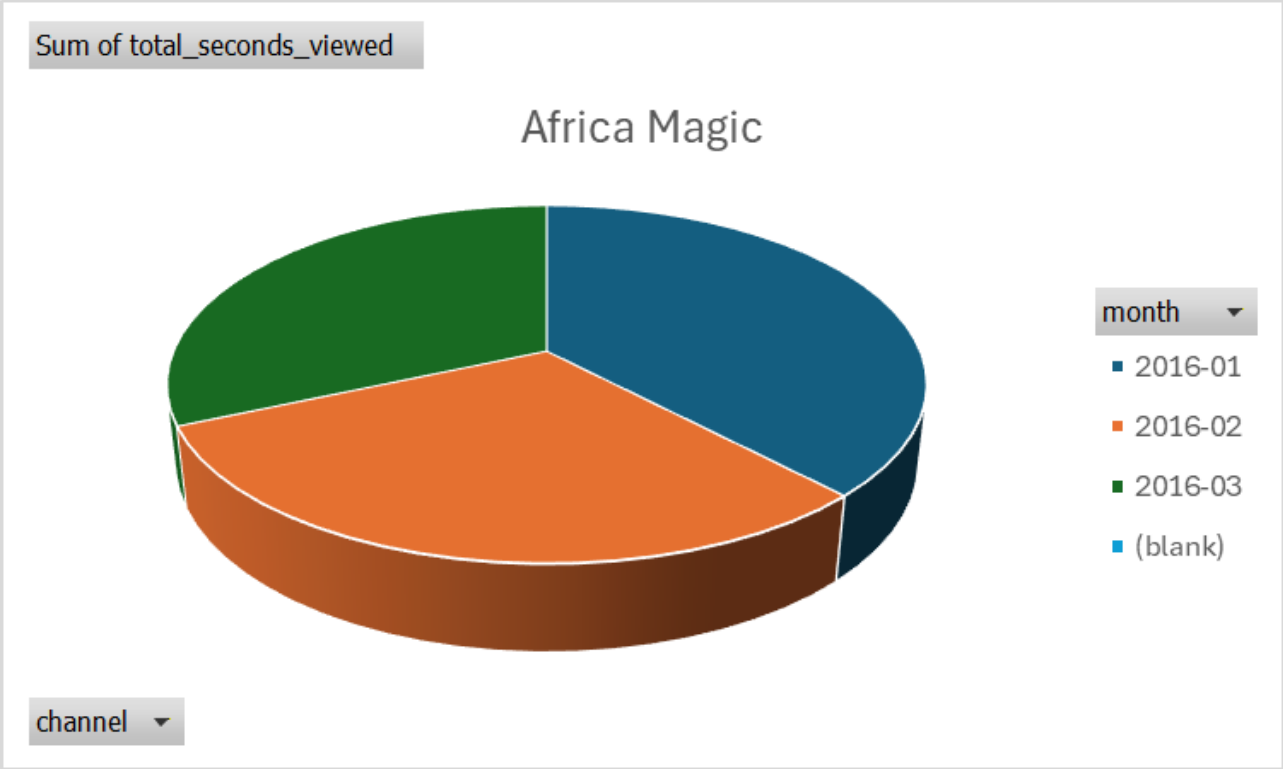
Looked for consistency rather than one-off spikes.

**Step 5: Audience Consumption Behavior Review**

Analyzed viewing behavior patterns to understand how and when users consume content.

Identified opportunities to influence engagement through timing and content placement.

# Cross-Board Strategic Recommendations for Bright TV



**1. Shift from Month-Driven to Momentum-Driven Programming**

Plan programming and promotions in rolling cycles, not isolated monthly bursts.

Introduce mid-cycle content refreshes, teasers, or featured collections.

**2. Use Top Channels as Traffic Drivers for the Platform**

Leverage high-performing channels (like Africa Magic) to cross-promote lesser-viewed channels.

Introduce “If you enjoyed this, try…” placements.

**3. Align Content Strategy to Time-of-Day Behavior**

Position short, repeatable or lighter content during daytime hours.

Reserve premium and long-form content for peak evening periods.

**4. Proactive Drop-Off Prevention**

Monitor month-over-month declines as early warning signals.

Trigger interventions such as featured content, push notifications, or thematic weeks when engagement dips.

**5. Make Performance Tracking Actionable**

Move beyond reporting “what happened” to tracking what is changing.

Use dashboards to flag declining channels, months, or time slots automatically.
